The Tech Interactive

Exhibits, Labs & Things to Explore Guide

Featured Exhibits

Innovation in Bloom

A two-story interactive exhibit where visitors launch balls through winding tubes, blooming flowers, and local animal figures, concluding with a collaborative ball track cascading finale.

Dream Garden

An AI-powered immersive exhibit that translates ideas and movements into a surreal ecosystem, including a look behind the scenes at the supporting technology.

Pixel Playground

A dynamic space blending physical play and digital innovation through activities like building block animals to train AI, designing roller coasters, and digital painting.

Body Worlds Decoded

Features real human anatomy displays—including 8 full-body plastinates and over 60 individual specimens—alongside live demonstrations of the Anatomage 3D virtual dissection tool and art by Lauren A. Toomer.

Solve for Earth

An environmental innovation exhibit highlighting renewable energy solutions, waste reduction strategies, and technology addressing climate challenges.

Hands-On Experiences & Labs

The BioTinkering Lab

A hands-on bioengineering space to experiment with biotech and collaborate on living organism applications.

BioDesign Studio

An interactive studio focused on exploring biological systems and problem-solving through life sciences.

The Tech Studio

Features guided innovation experiences and open design time for unstructured building.

More to Explore

AI Sandbox

Demonstrates real-world AI applications, including IBM's partnership with NASA/ESA for sustainability challenges, the *Transformirror* AI art experience, and motion-tracking software.

Cyber Detectives

A digital investigation exhibit where guests solve virtual mysteries, decipher encrypted messages, and learn about internet safety.

Innovations in Health Care

Highlights medical technologies such as delivery drones, wearable biosensors, 3D bioprinting, thermal imaging, and early cancer detection methods.

Social Robots

A hands-on station using real sensors and actuators to design, customize, and program functional robots.

Tech for Global Good

Features stories and work from global innovators using technology for social change (including BCI Pioneers Coalition, Cognixion, NexStride, and Sanmai Technologies).
